Introduction

The “Sports Participation in the United States” study is a research program designed to measure the number of individuals seven years of age or older who participated in each of a number of different sports / recreational activities within the previous year.

This study measures the annual number of participants in each sport/activity, the frequency of participation (number of days of participation in 2025), total days of participation, and the mean (average) and median (mid-point) number of days of participation.

This report includes quick-view snapshots and detailed tables related to overall participation, lifecycle demographics and cross participation. Overall participation is broken out by :

- Gender, Age, and Presence of Children age 18 or under in the household
- Male Age, Mean Age, and Education of Male Household Head (if present)
- Female Age, Mean Age, and Education of Female Household Head (if present)
- Household Income and Market Size
- U.S. Census Region

The Single Sports Detailed Tables are generated for selected demographics, including gender, age, mean, and median ages by gender and frequency of participation, education of male and female household heads (if present), household income, market size, and U.S. census region.

Methodology

Sampling

The “Sports Participation in the United States,” research was conducted by Ipsos using an online panel maintained by Ipsos. The panel is profiled on a number of characteristics including age, gender, zip/postal code, household size and composition, education and household income, enabling balanced sample to be achieved.

As a note, 2010 was the first year that an online survey methodology was used for collecting data on sports participation. Prior to 2010, this annual study was conducted using a mail back survey methodology. Please keep this in mind when making direct comparisons with data published prior to 2010.

Questionnaire

In January 2026, sample members of the Ipsos panel were invited to complete the sports participation survey online. Respondents were asked to indicate the age and gender of all household members age seven and older and provide the number of days of participation for each sport / activity in 2025 for up to 4 household members including themselves. In order to reduce a bias effect that is possible from the order in which the sports were listed, the sports were presented in a randomized order.

Returns

The study results are based on approximately 25,000 individuals who are ages 7 and older.

In order to ensure returns were representative of the U.S., the data was weighted to represent the demographic composition of the U.S. based on the 2024 census for the following characteristics: census region, household income, age and gender. The returns were then projected to 311,928,000 – the most recent projection for the U.S. population age 7 and older at the time of the study.

Data Indicated in the Report

Participants

A participant is defined as an individual seven years of age or older who participates in a sport/activity at least two days in a given year for all sports/activities except bicycle riding, exercise walking, exercising with equipment, running/jogging, swimming, weightlifting, and work out at club/gym/fitness studio. For these fitness activities, participation is defined as six days or more during the year.

The definition of "Frequent", "Occasional" and "Infrequent" participants varies for each sport/activity and is indicated in the report. For sports/activities where the incidence of participation is low, participants may be divided into "Frequent" and "Occasional" only.

Geographic Tables

The tables in this report show the demographic distribution of participants for each sport by geographic region. The states in the geographic regions are:

<u>New</u>	<u>Middle</u>	<u>East</u>	<u>West</u>		<u>East</u>	<u>West</u>		
<u>England</u>	<u>Atlantic</u>	<u>North</u>	<u>North</u>	<u>South</u>	<u>South</u>	<u>South</u>	<u>Mountain</u>	<u>Pacific</u>
		<u>Central</u>	<u>Central</u>	<u>Atlantic</u>	<u>Central</u>	<u>Central</u>

Data Indicated in the Report (cont'd)

Lifecycle Segments

The LifeCycle segments used in this report are:

- **High Income Singles:** one-person household, under age 65, top third in household income (\$100,000)
- **Low/Middle Income Singles:** one-person household, under age 65, bottom two-thirds in household income (under \$100,000)
- **Young Adult Household:** two or more in household, no children under 18, adults ages 18-44
- **High Income Families:** two or more in household, children under 18, at least one adult age 18+, top third in household income (\$100,000+)
- **Low/Middle Income Families:** two or more in household, children under 18, at least one adult age 18+, bottom two-thirds in household income (under \$100,000)
- **High Income Middle-Aged Household:** two or more in household, no children under 18, primarily ages 45-64 but with at least one adult age 45+, top third in household income (\$100,000+)
- **Low/Middle Income Middle-Aged Household:** two or more in household, no children under 18, primarily ages 45-64 but with at least one adult age 45+, bottom two-thirds in household income (under \$100,000)
- **Seniors:** all household members 65+

Participation Overview

Snapshots

Participation Overview Snapshots: How to Read

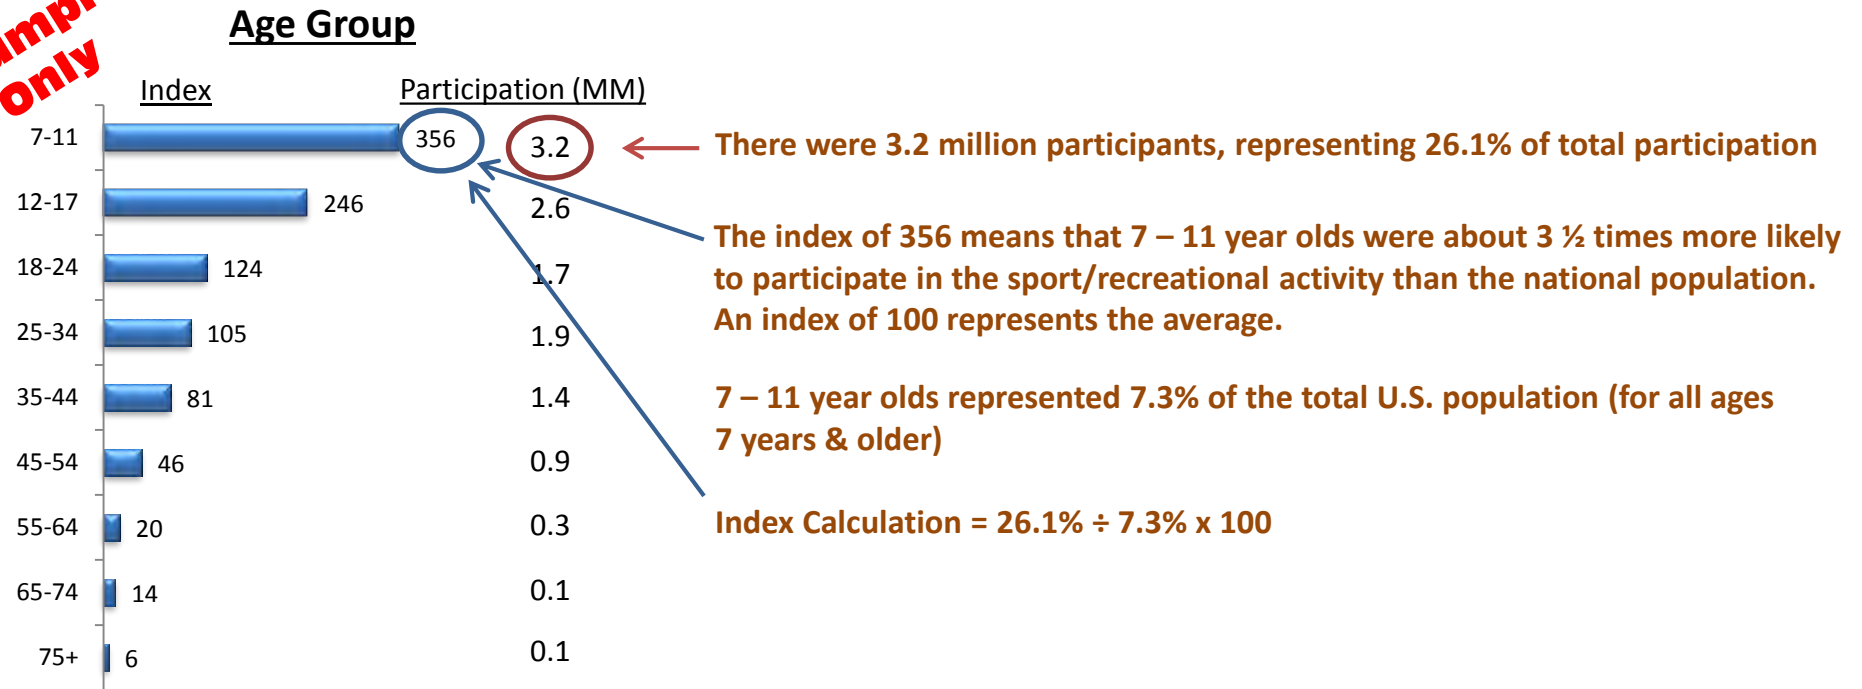

Participation Definitions

Participant: for this sport/activity an individual 7 years of age or older who participated at least 2 days during 2025. Frequent, Occasional, and Infrequent participation are defined within the frequency pie chart on the following pages. As an example, “Frequent (20+)” means a person must have participated at least 20 days during the year to be considered a frequent participant.

Explanation / Example of an Index

An index removes bias towards participation in larger segments of the population by focusing on concentration of participation within a given segment. It determines if participation within that segment is under or over-developed as compared to the other segments being examined.

Example Only

Sport Participation Overview Snapshot #1

Participation (in millions)

Frequency of Participation

Total Participation

- In 2025 there were 12.6 million sport participants in the U.S.
 - 7.6 million (60%) were male
 - 5.0 million (40%) were female

Frequency of Participation

- 11.8% were frequent participants (participated 20 or more days during 2025)
- 44.2% were occasional participants (participated 5 – 19 days during 2025)
- 44.1% were infrequent participants (participated 2 – 4 days during 2025)

Sport Participation Overview Snapshot #2

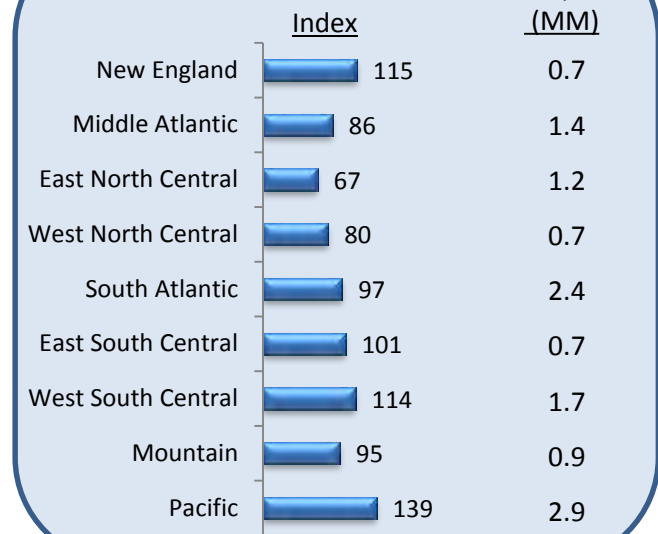

By Age Group

By Household Income

By U.S. Region

Demographics/Geographics

- *Age: Participation was most developed within the 25 – 34 age group*
 - *i.e. There were 2.9 million participants between 25 – 34 years old, this segment was 1½ times more likely to participate in this sport/activity than the average population*
- *Household Income: Participation was most developed among households with higher incomes*
- *U.S. Region: Participation was most developed within the Pacific region*

Lifecycle Demographic Snapshots

Lifecycle Demographics: Segments

Segment Definitions

- **High Income Singles:** one-person household, under age 65, top third in household income (\$100,000)
- **Low/Middle Income Singles:** one-person household, under age 65, bottom two-thirds in household income (under \$100,000)
- **Young Adult Household:** two or more in household, no children under 18, adults ages 18-44
- **High Income Families:** two or more in household, children under 18, at least one adult age 18+, top third in household income (\$100,000+)
- **Low/Middle Income Families:** two or more in household, children under 18, at least one adult age 18+, bottom two-thirds in household income (under \$100,000)
- **High Income Middle-Aged Household:** two or more in household, no children under 18, primarily ages 45-64 but with at least one adult age 45+, top third in household income (\$100,000+)
- **Low/Middle Income Middle-Aged Household:** two or more in household, no children under 18, primarily ages 45-64 but with at least one adult age 45+, bottom two-thirds in household income (under \$100,000)
- **Seniors:** all household members 65+

Lifecycle Demographics Snapshots: How to Read

Lifecycle Demographics Snapshot #1: Participation Index

Provides a view of participation through use of an index. An index removes bias towards participation in larger segments of the population by focusing on concentration of participation within a given segment. It determines if participation within that segment is under or over-developed as compared to the other segments being examined.

Example Only

The index of 194 indicates that this segment was almost 2 times more likely to participate in the sport/activity than the national population. An index of 100 represents the average.

The index is calculated by using the example data in the charts below:
 $18.8\% \div 9.7\% * 100 = 194$

Lifecycle Demographics Snapshot #2: % of Participation

Provides a view of participation as a % of total U.S. population.

Example Only

This segment represented 9.7% of the total U.S. population (ages 7+)

This segment represented 18.8% of this sport's participation

Sport Lifecycle Demographics Snapshot #1

Index to Total U.S. Population (Ages 7+)

Sport Participants = XX,XXX,XXX

Sport Lifecycle Demographics Snapshot #2

Distribution of Participation

Sport Participants = XX,XXX,XXX

Cross Participation Snapshot

Cross Participation Snapshot: How to Read

How to Read Cross Participation Data:

Example Only

Sport Z

	<u>% Sport Participants Also Participating In....</u>	<u>% Active</u>	<u>Index</u>
Sport A	46.4%	16.4%	283
Sport B	43.9%	19.7%	223
Sport C	42.7%	13.8%	309
Sport D	42.1%	12.4%	340

46.4% of participants in Sport Z also participated in Sport A

16.4% of the active population (those who participated in at least one sport/activity tracked) participated in Sport A

The index of 283 indicates participants in Sport Z were almost 3 times more likely to also participate in Sport A.

The index is calculated in the following manner:
 $46.4\% \div 16.4\% * 100 = 283$

An index of 100 represents the average as compared to the total active population.

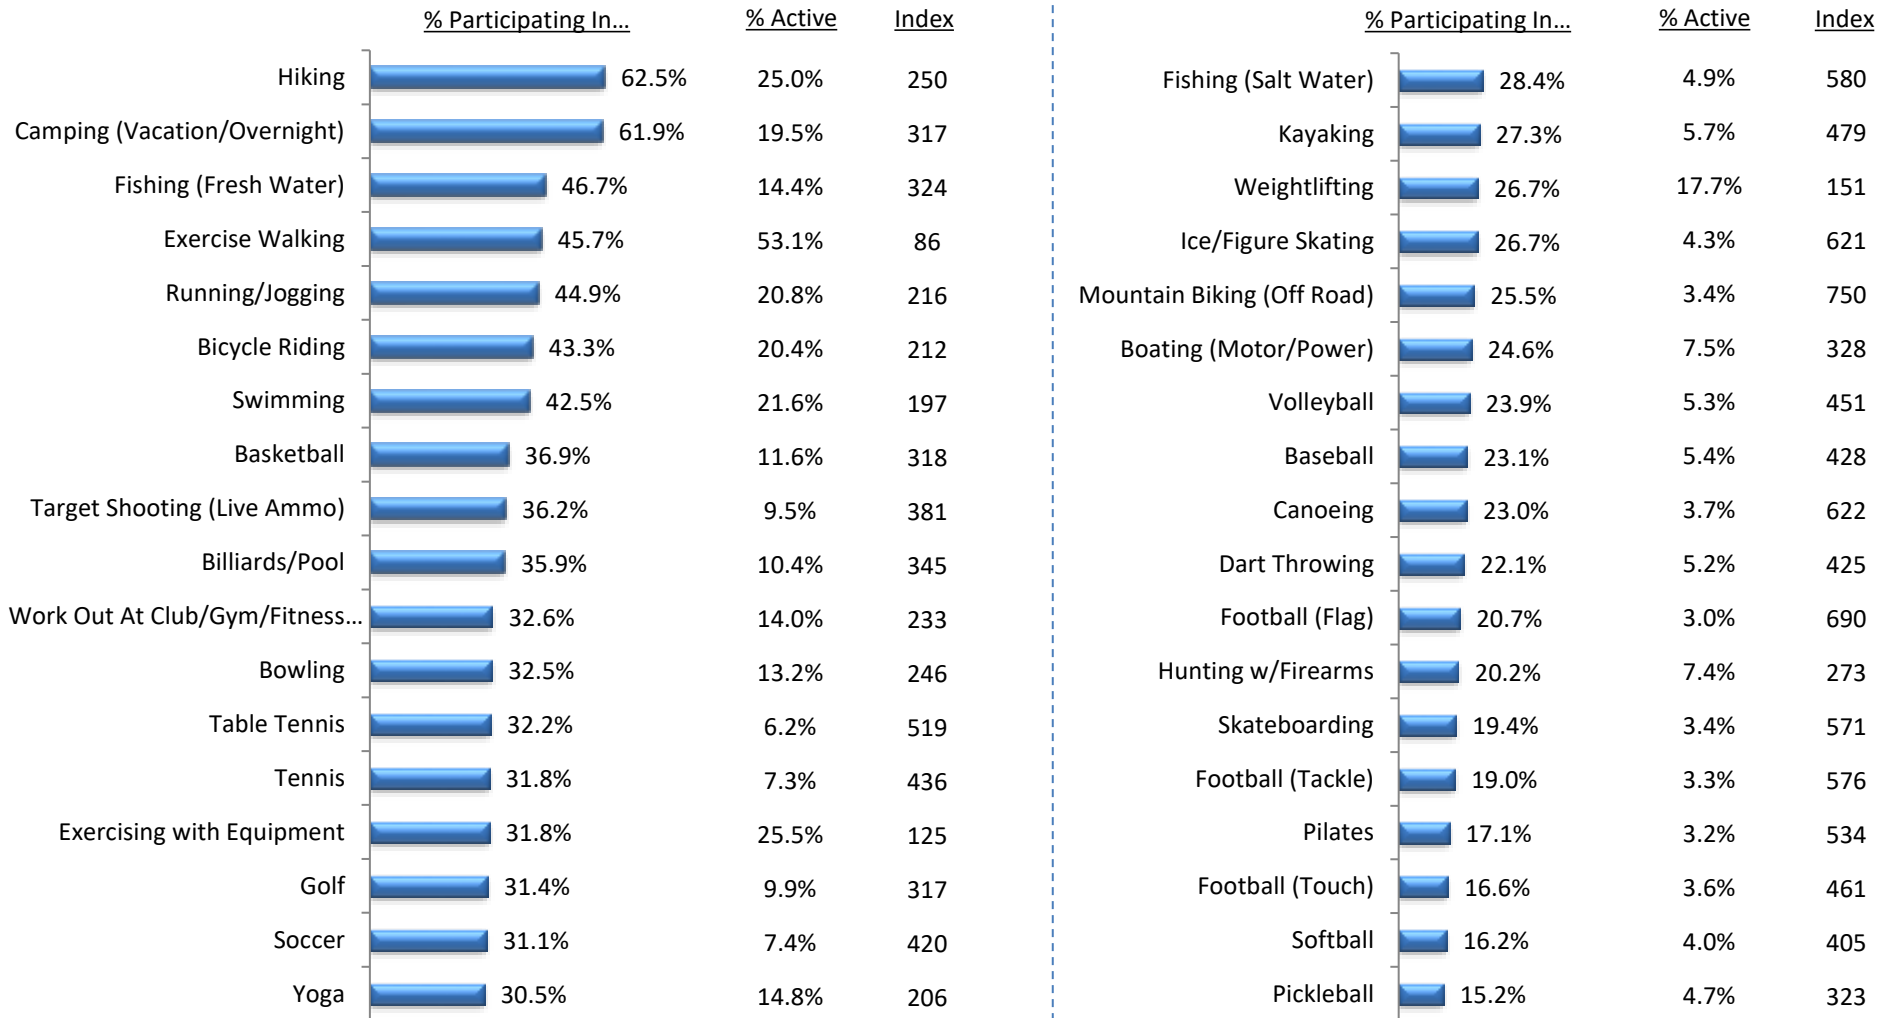

Sport Cross Participation

Sport Cross Participation

Including Index vs. Total Active Population

How to Read:

Most data sets have three rows:

- Row 1: total participation for that segment (i.e. 2.4 million participants are males between 12-17 yrs. old)
- Row 2: read vertically (i.e. 26.5% of male participants are frequent participants, 53.9% are occasionals, and 19.6% are infrequent)
- Row 3: read horizontally (i.e. 30.4% of the 2.9 million frequent male participants are between 7-11 yrs. old; $30.4\% / 88.5\% = 34.4\%$ of frequent male participants are between 7-11 yrs. old)
